Pes Cavus Foot Orthoses

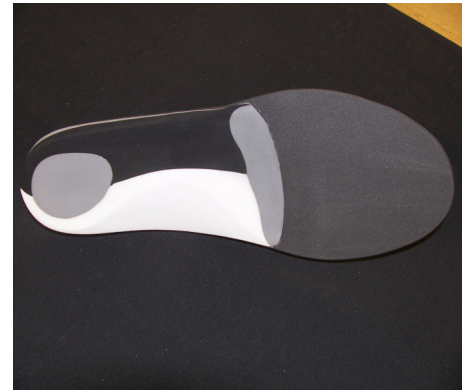

Our unique Pes Cavus tri-lam custom foot orthotics are designed to provide close contoured medial longitudinal arch support with a medium Durometer EVA (white) while loading the lateral column with a firm Durometer EVA (black) to reduce over supination and stabilize the foot. (See plantar view below)

The superior shell material layer is a soft Durometer EVA (grey) to aid in shock absorption and creates a naturally shaped intrinsic heel cushion.

The top cover default is Intuition Foam, its comfortable and light weight; of course, you can choose from our full range of top covers as you wish, other materials that compliment this orthotic are HB Foam and VPhoam.
